

BED SORE PREVENTION PAD CORRUGATED

ABOUT THE PRODUCT

A corrugated bed sore prevention pad is a thick, cushioned pad made from a medical-grade gel or similar material. Its main purpose is to reduce the risk of pressure sores (also known as bed sores or pressure ulcers) for individuals who are bedridden or spend extended periods in a chair. The pad's corrugated surface, which features a series of ridges, is specifically designed to enhance air circulation and provide superior pressure distribution. This texture helps to minimize friction and shear forces on the skin, which are primary causes of skin breakdown. The pad can be used on a bed, in a wheelchair, or on a chair to provide targeted protection for the user's hips, tailbone, and other high-risk areas.

BENEFITS

- Corrugated gel layer 18 mm thick with cloth cover provides ultimate comfort and better posture.
- Reduces Skin temperature, heat flux and relative humidity.
- Temperature remains static under the ischial tuberosities and posterior thighs.
- Effectively reduce ischemic tissue damage.
- Reduces the incidence of pressure sores.

HOW TO USE

- Place the pad under the pressure-prone area (heels, elbows, hips, tailbone).
- Make sure it lies flat with the cushioned side facing up.
- Position the patient gently so the area rests comfortably on the pad.

Instructions : If the product gets dirty or sticky, clean with talcum powder, rinse with mild shampoo and water, shade dry, and avoid direct heat.

Safety : Keep away from heat and sharp objects.
